# TUBING

An inflatable tubing sled is similar to a car tire with a bottom and handles. A durable frame made of elastic polymers and rubber is covered with a special material with excellent sliding properties.

The design minimizes the risk of injury during riding for children and adults.

Tubing rentals are organized: choose a sled, go up the mountain, and masterfully slide down to the bottom with sharp turns. The longer you ride, the lower the per minute price! Use the automated lift or walk up the right side of it.

| TARIFF       | Weekdays | Weekend and holidays |
